Small Mistakes With Grave Consequences:
Unraveling The Mechanisms Of Genome Instability
To Treat Cancer

Monday, 20th May, at 15:00 - 16:00
Maesk Tower, 7.15.92

Prof. Wojciech Niedzwiedz studied Biophysics at the Jagiellonian University, Krakow, Poland (1990-1995). He obtained a PhD in Radiation Biology from the Institute of Nuclear Physics, Silesian University, Poland in 2000. After postdoctoral research at MRC-LMB in Cambridge, (2002-2007), he was awarded fellowships by AICR and MRC/WIMM to set up his own group at the Weatherall Institute of Molecular Medicine, Oxford (2008-2016). In January 2017, he relocated his group to the Institute of Cancer Research (ICR) in London. The same year he was appointed Professor of Molecular Cancer Biology at the ICR. His research is focused on the understanding of molecular mechanisms underlying genomic instability and DNA damage repair.
